- Willing to learn
- Teamwork
- Problem solving
- Communication

TOOLS

- Visual Studio
- VS Code
- Github
- Github Copilot

Language

- English
- Filipino

PROFILE SUMMARY

Software Developer with over 3 years of experience in full-stack web application development. Strong background in backend APIs, database-driven systems, and frontend development using Node.js and Angular. Experienced in Agile environments, system improvements, and cloud-based deployments. Adaptable and quick to learn new technologies.

Experience

○ **FEB 2023 - Present**
Package Application Developer / Web Developer

Junior Software Engineer

- Developed, and improved web applications, internal systems, and APIs in line with business requirements.
- Contributed to both backend and frontend development using Node.js, Angular, Python, and MySQL.
- Assisted with application support and maintenance, including bug fixes, performance enhancements, and feature updates.
- Participated in requirements discussions, design reviews, and sprint planning with project managers and Product Owner.
- Conducted unit testing, troubleshooting, and validation prior to deployment.
- Prepared and maintained technical and system documentation to support development and ongoing maintenance.
- Worked collaboratively with cross-functional teams in an Agile/Scrum environment.
- Developed a proof-of-concept Agentic AI system, integrating AI workflows with web applications and databases.
- Managed team branches and repository updates (SCM).
- Automated UI/backend deployments.
- Debugged APIs and monitored Lambda functions (Env Manager).
